

## vytio residential care

### Vytio for Residential Care

#### A truly customizable Seniors Residence Entertainment & Experience IPTV Platform

Look no further for the perfect seniors' residence entertainment and experience platform to fit your facility. Unmatched in its functionality, scalability, and reliability, **Vytio for Residential Care** is the perfect fit for any Seniors Residential Care community.

The core of the **Vytio for Residential Care** platform is a customizable, feature-rich IPTV Middleware solution. Residential Care operators can customize the look & feel and the information on their television screens exactly to brand-standards and can easily adjust the content. Our solution also delivers digital TV programming with an EPG, an easy-to-use remote control, and optional recording functionality.

From inside the resident's room or apartment, **Vytio for Residential Care** expands outwards via a portfolio of residential care-specific services and features including Digital Signage (e.g., daily calendar of events), local channel integration (lobby, exercise, and chapel), VytioCast (Chromecast Management), and Emergency Channel Tuning.

**Vytio for Residential Care** streamlines the experience for both residential care staff and seniors by integrating with various Point-of-Sale (POS) systems, Spa Management, Emergency Alert Systems (EAS), and Room Control/HVAC providers.

**Vytio for Residential Care** is endlessly flexible and scalable, offering varying levels of services, features, and price points. We also fully support LG, Amino and Android set top boxes, LG, SONY, Samsung, and Philips commercial Smart TVs. Vytio will work with you to customize a solution that fits your operation – not the other way around.
