

High Capacity Digital Media Gateway

DMG 4000

LIMITLESS VIDEO NETWORK OVER IP

The Sencore DMG 4000 - Digital Media Gateway platform is a dedicated solution for high-speed video networking, enhanced IP security, video distribution and contribution. Designed for near limitless capacity, extensive video awareness, enhanced security, operational simplicity and exceptionally high reliability, the platform redefines video delivery.

With IP network technology and infrastructure evolving, the distribution of video is changing. Legacy infrastructure are being replaced by transmission over standard IP-based networks. With 10G and 100G IP infrastructures available, broadcasters seek ways to use the added capacity, primarily for internal uncompressed or lightly compressed video contribution.

Specifically designed for IP-centric operations, the 4100/4200 chassis has a significant video processing capacity. 10G bi-directional IP interfaces provide firewall-grade IP security at every connection node. Operating at a minimum internal throughput of 140G, the new backplane extends Sencore's tradition of patented redundancy options.

The DMG 4000 platform supports conversion of uncompressed video from/to legacy SDI and SDI over IP with options to perform "light" compression/decompression using intra-codecs such as TICO, JPEG XS and JPEG2000 or full encoding/decoding using AVC or HEVC. With backplane latency of less than 1ms, universal applicability for virtually any video application is ensured, as is the implementation of both current and future IP video standards, including SMPTE 2110 and SMPTE 2022-6.

CHASSIS

The DMG 4000 platform consists of a compact 1RU - DMG 4100 as well as a capacious 2RU - DMG 4200 option. Both chassis can be used independently, or in conjunction with Sencore's widely deployed DMG 3000 series chassis. Built around an in-house developed, high-capacity bus architecture that connects all modules, the DMG 4000 platform operates with dual hot-swappable power supplies, dual front-mounted control modules and six or twelve rear-mounted option slots. A -48VDC power supply option is also available.

Dual control modules can optionally be fitted to either model and will operate in active/active redundancy mode with redundant backplanes to provide seamless recovery from many critical fault scenarios. All option modules mounted in the rear are interchangeable between the DMG 4100 and DMG 4200. All modules are hot-swappable (including power supplies and fans). The new software architecture enables different software versions to run on different modules, allowing new functionalities to be delivered to customers faster.

The product can be fitted with a range of input, processing, and output modules that enable bridging between commonly used legacy video platforms and an all-IP infrastructure. With support for MPEG TS multiplexing, DVB scrambling/descrambling and dense power efficient AVC/HEVC encoding/decoding, the DMG 4000 platform is ideal for video processing in legacy DVB networks such as cable, satellite, terrestrial and IPTV. The Control/Switch module and the Dual IP IO modules provide native 10G uni-directional and bi-directional port connectivity.

Service density can be defined up to 2,000 services in and out per module, while set-up and configuration is streamlined. The user interface offers multi-selection of channels or multiplexes enabling configuration changes on multiple of flows with a minimum number of operations. Extensive search capabilities allow the operator to easily locate groups, services, etc.

FEATURES

2RU - DMG 4200

- Modular configuration with up to 12 option slot boards
- WEB based configuration, LED indicators on PS and modules
- Forced air-cooling (front to back)
- Dual redundant hot-swappable PS
- Hot-swappable modules
- 100-240 V AC, 50/60 Hz
- -48VDC

1RU - DMG 4100

- Modular configuration with up to 6 option slot boards
- WEB based configuration, LED indicators on PS and modules
- Forced air-cooling (front to back)
- Dual redundant hot-swappable PS
- Hot-swappable modules
- 100-240 V AC, 50/60 Hz

DIMENSIONS

2RU (DMG 4200)

19" x 2RU x 540 mm (440 x 88 x 540 mm) (w x h x d mm)

1RU (DMG 4100)

19" x 1RU x 540 mm (440 x 44 x 540 mm) (w x h x d mm)

The DMG 4200 and DMG 4100 use the same set of modules and same SW, although the Control/Switch module differs between the two.

HIGHLIGHTS

The DMG 4000 platform has been developed to exploit new opportunities driven by the increasing deployment of ultra-high speed IP networks within all areas of broadcasting. Designed to meet all challenges that a full IP-based infrastructure presents, the platform features:

HIGH SPEED

Multiple bi-directional 10G interfaces with the ability to route up to 140G of traffic internally.

DELAY

Low backplane latency (below 1ms) making overall contribution to delay negligible. Whenever delay buffers are required (such as IP de-jitter), buffer size and consequently delay is adjustable.

MPEG & NATIVE IP HANDLING

The ability to handle all commonly used video protocols provides a future proof solution. The DMG 4000 platform is based on flexible programmable hardware, new standards not currently defined will be added when required.

AVC, HEVC, TICO, JPEG XS AND JPEG2000 COMPRESSION

All common compression technologies used in professional broadcasting are supported, making the DMG 4000 platform adaptable to all operational requirements within contribution, remote production, video networking and distribution.

IP NETWORK SECURITY

A video centric, cost-effective, easy to deploy, high-capacity firewall feature that can monitor and regenerate traffic as required.

CAPACITY

Most modules support up to 4,000 (2,000 in and 2,000 out) streams / services per module and 10G of traffic.

MONITORING & CONTROL

A built-in management system to control a potentially vast array of linear and on-demand service traffic effectively, as traditional IPTV / OTT worlds merge. A wide range of external monitoring and control options including SNMP, Syslog & Prometheus support.

SDI TO IP

A high-density SDI input / output module supporting SMPTE 2110 and SMPTE 2022-6 enables bridging classical SDI based coax / fibre networks to IP.

ACCESS CONTROL

A new standard of access control, user management and IP security to secure access to critical network devices. A user account with four different access levels can be defined per user.

REDUNDANCY

Designed to be as reliable and failsafe as possible, even when used stand-alone. The uniquely efficient, built for purpose hardware design is engineered for high reliability and stability. Should an internal failure take place, a range of redundancy options can take effect to keep the chassis fully operational. Dual active - active control/switch module redundancy with internal seamless traffic switching can optionally be deployed within the chassis to make recovery from many critical errors totally seamless.

ENHANCED SECURITY

There are typically multiple locations within a modern broadcasting environment necessitating secure video interfaces between sites, especially when implemented using public networks. The high level of security needed must protect the different sites from outside attacks as well as protect the integrity of video transmission itself. Being a fully operational video firewall, the DMG 4000 platform maintains tight security on its control layer, supporting many advanced features encompassing Authentication, Authorisation and Audit. Security is assured by Sencore's own FPGA based IP packet forwarding mechanism and proprietary internal network structure.

Video-centric features provided in the DMG 4000 platform include:

- Multicast forwarding (IGMP join and forward)
- Inspect and forward MPEG-2 TS packets (deep layer 5/6 packet inspection)
- De-multiplex MPEG-2 TS streams
- Encryption and decryption of video data
- Seamless network protection according to SMPTE 2022-7
- Encode and decode SMPTE 2022-1 supplementary FEC

OVERVIEW

- Modular
- Scalable
- Compact with multiple inputs/outputs per module
- Advanced input analysis and status information

- Easy to configure from one common web GUI interface
- Hot swappable
- Wide range of optional modules
- Mix and match card types freely, and add as many as you need

MODULES

Control/Switch DMG 4100

Total capacity: 80 Gbps full duplex
10 Gbps routing between modules in a chassis
Bitrate: 2 1/10G Base-T Ethernet or 1G SFP/10G SFP+ (Base-T or SFP must be selected at order)
Interface: IPv4, IPv6, IGMP v2/v3, ICMP, ARP, 802.1Q (VLAN tag)
Protocols: TS over UDP/RTP, SDI over SMPTE 2022-6 / SMPTE 2110, AES67, L2TP (Output)
Data encapsulation: BISS2 Mode 1/E, BISS CA
Scrambling/descrambling: De-multiplexing, Multiplexing, Service and PID filtering, PSI/SI re-generation
TS Processing: Free running, PTP, GenLock*, GPS**
Clock Options:

DMG 4200

Total capacity: 140 Gbps full duplex
10 Gbps routing between modules in a chassis
Bitrate: 2 1/10G Base-T Ethernet or SFP+ 2x 1G Base-T
Interface: Ethernet IPv4, IPv6, IGMP v2/v3, ICMP, ARP, 802.1Q (VLAN tag)
Protocols: TS over UDP/RTP, SDI over SMPTE 2022-6 / SMPTE 2110, AES67, L2TP (Output), Port data tunneling
Data encapsulation: BISS2 Mode 1/E, BISS CA
Scrambling/descrambling: De-multiplexing, Multiplexing, Service and PID filtering, PSI/SI re-generation
TS Processing: Free running, PTP, GenLock*, 10MHz, GPS**
Clock Options: *Must be selected at order. ** Future, requires hardware options*

Dual 10G IP IO

Interface: 2 1/10G Base-T Ethernet or 1G SFP/10G SFP+ (Base-T or SFP must be selected at order)
Protocols: IPv4, IPv6, IGMP v2/v3, ICMP, ARP, 802.1Q (VLAN tag)
Data encapsulation: TS over UDP/RTP, SDI over SMPTE 2022-6 / SMPTE 2110, AES67, L2TP (Output), SRT, Zixi
TS Processing: De-multiplexing, Multiplexing, Service and PID filtering, PSI/SI re-generation

DVB-S/S2X Input

Connectors: 4 x F 75 Ohm
Demodulators: 32 in blocks of 16 (each block has 2 RF inputs)
Satellite standards: DVB-S EN 300 421, DVB-S2 EN 302 307 - 1, DVB-S2X EN 302 307 -2 Broadcast Services
Frequency range: L-band (950 - 2150 MHz)
Modulation: QPSK, 8PSK, 16APSK, 32APSK, 64 APSK, 128 APSK, 256 APSK
Symbol rate: Up to 64 MBaud
Descrambling: BISS 1 Mode 1/E, BISS2 Mode 1/E, BISS CA
TS Processing: De-multiplexing, Service and PID filtering, PSI/SI re-generation

DVB-S/S2X Modulator

Number of modulators: 2
Interface per modulator: 1x SMA 50 Ohm output, 1x SMA 50 Ohm monitoring output, 1x SMA 50 Ohm input (redundancy) Relay switch on output for each modulator
Redundancy (optional): DVB-S EN 300 421, DVB-S2 EN 302 307 - 1, DVB-S2X EN 302 307 -2 Broadcast Services
Satellite standards: IF and L-band (950 - 2150 MHz)
Frequency range: QPSK, 8PSK, 16APSK, 32APSK, 64 APSK, 128 APSK, 256 APSK
Modulation: Up to 72 MBaud
Symbol rate: BISS 1 Mode 1/E, BISS2 Mode 1/E, BISS CA
Scrambling: Multiplexing, PSI/SI re-generation
TS Processing:

SDI/2110/2022-6 IO

Connectors: 8x HD BNC 75 Ohm (Slx110)
 3x Video SFP (Non-MSA Dual rx/ Dual Tx) (Slx200)
 2x QSFP (10GbE, 25GbE or 40GbE) (IPx210)

Video Format: 12G-SDI (SMPTE 2082)
 3G-SDI (SMPTE 424M)
 HD-SDI (SMPTE 292M)
 SD-SDI (SMPTE 259M)

Data flow: Input or output
 Codecs – encoding/decoding: Uncompressed, TICO, JPEG XS, JPEG2000 (Slx110/Slx200/IPx210*)
 Video encapsulation: SMPTE 2110-20, SMPTE 2022-6, TS

* IPx210 currently supports uncompressed and JPEG XS

ASI IO

Connectors: 8x HD BNC 75 Ohm
 16x HD BNC 75 Ohm (Slx110/Slx120)

ASI Format: 188 byte TS – spread and burst mode

Data flow: Input or output

Video encapsulation: TS

TS Processing: De-multiplexing, Multiplexing, Service and PID filtering, PSI/SI re-generation

HEVC Encoder

Video Input connectors: 8x HD BNC 75 Ohm or 2x QSFP (10GbE, 25GbE or 40GbE)

Number of Services: 2x UHD, 8xFHD, HD, SD

Video Input format: 12G-SDI (SMPTE 2082)
 3G-SDI (SMPTE 424M)
 HD-SDI (SMPTE 292M)
 SD-SDI (SMPTE 259M)
 SDI over SMPTE 2022-6
 SDI over SMPTE 2110 with PTP

Data encapsulation: AVC and HEVC

Codecs: SD, HD, FHD, UHD (UHD only on HEVC)

Resolutions: 8/10 bit, 4:2:0/4:2:2, Standard/Low delay/Ultra low delay

Encoding mode: Long-term and short-term loudness leveling, peak limiting

Audio leveling:

HEVC Transcoder

Number of Services: Up to 2x UHD or 8xFHD, HD, SD

Decoder: MPEG-2, AVC and HEVC

Encoder: AVC and HEVC

Operation modes: Combined Multiscreen and broadcast

Component: Passthrough with PCR/PTS sync

Audio leveling: Long-term and short-term loudness leveling, peak limiting

HEVC Decoder

Video output connectors: 8x HD BNC 75 Ohm or 2x QSFP (10GbE, 25GbE or 40GbE)

Number of Services: 2x UHD, 4xFHD, HD, SD

Video output format: 12G-SDI (SMPTE 2082)
 3G-SDI (SMPTE 424M)
 HD-SDI (SMPTE 292M)
 SD-SDI (SMPTE 259M)

Data encapsulation: SDI over SMPTE 2110 with PTP

Codecs: AVC and HEVC

Resolutions: SD, HD, FHD, UHD (UHD only on HEVC)

Decoding Modes: 8/10 bit, 4:2:0/4:2:2, Standard/Low delay/Ultra low delay

Scrambler

Scrambling capacity: 2000 services/6 Gbit/s

Scrambling algorithm: DVB-CSA v1 (48-bit)
 DVB-CSA v2 (64-bit)
 AES (128-bit)

Entropy reduction: Yes for DVB-CSA v1 (Reduced to 48-bit)

CA system interface: DVB simulcrypt compliant
 BISS1 Mode 1

Simulcrypt scrambling: Up to 8 CA systems

Simulcrypt interface: 2 1/10G Base-T Ethernet or 1G SFP/10G SFP+ (Base-T or SFP must be selected at order)

Bulk Descrambler

Descrambling capacity: 2000 services/6 Gbit/s (depends on crypto period)

Scrambling algorithm: DVB-CSA (64-bit)
 AES (128-bit)

CA systems: Verimatrix, BISS1 Mode 1/E, BISS2 Mode 1/E

CA authentication interface: 2 1/10G Base-T Ethernet or 1G SFP/10G SFP+ (Base-T or SFP must be selected at order)

CONTROL/SWITCH MODULE - SWx100, SWx110, SWx120, SWx130, SWx200, SWx210

DMG 4100 Switch fabric	Total capacity: Bitrate: Placement: Interface:	80 Gbps full duplex 10 Gbps routing between modules in a chassis Front loaded 2 1/10G Base-T Ethernet or 2x1G SFP/10G SFP+ (Base-T or SFP must be selected at order)
DMG 4200 Switch fabric	Total capacity: Bitrate: Placement: Interface:	140 Gbps full duplex 10 Gbps routing between modules in a chassis Front loaded 2 1/10G Base-T Ethernet, SFP/SFP+, and 2x 1G Base-T Ethernet
Control/Switch module - common features for DMG 4100 and DMG 4200		
Dataports	Operational mode:	Seamless Input (SMPTE 2022-7) Cloned Output (SMPTE 2022-7) Seamless Input and Cloned Output (SMPTE 2022-7 Full Duplex) Single Input and Single Output (on separate interfaces) Exclusive output (if D1 has link D2 is muted, D3 has link D4 is muted)

Additional features

Licensed Features:

Constellation:	QPSK – 256-APSK
Modulation mode:	CCM
FEC rates:	All
Frame length:	Short, Normal
PL scrambling:	Configurable Gold index or root
Symbol rate:	0.1 – 72MBd
Roll off:	0.05 - 0.35
Frequency range:	70 – 200MHz
Frequency accuracy:	1.5ppm
Output level:	-15 to 0dBm
Output level accuracy:	0.5dB
Output level setting accuracy:	1.0dB
In-band flatness:	0.1dB (typical)
Return loss:	>18dB
Spurious signal related:	< -65dBc/4kHz (typical) @5dBm, 256kBd
Spurious neighbour transponder related:	< -50dBc/4kHz (typical) @0dBm
Spurious non-signal related:	< -80dBc/4kHz (typical) @5dBm
Monitor port level:	-20dB relative to main output
Frequency range:	950 – 2150MHz
Frequency accuracy :	1.5ppm
Output level:	-40 to 7dBm
Output level accuracy:	0.5dB
Output level setting accuracy:	1.0dB
In-band flatness:	0.2 dB (typical)
Return loss :	>14dB
Spurious signal related:	< -65dBc/4kHz (typical) @5dBm, 256kBd
Spurious neighbour transponder related:	< -50dBc/4kHz (typical) @0dBm
Spurious non-signal related:	< -80dBc/4kHz (typical) @5dBm
Monitor port level:	-30dB relative to main output
Scrambling:	BISS1 Mode 1/E BISS2 Mode 1/E BISS CA
Multiplexing:	Yes
PID mapping:	Manual mapping of unreferenced PIDs
PCR regeneration:	Yes
Tables Supported:	MPEG PSI (PAT, CAT, PMT), DVB SI (SDT actual)
PSI/SI Table Regeneration:	Yes, based on input and operations performed
Output redundancy:	Automatic mute or switch to RF backup on error. Reverting or "switch once" mode
DC output:	24V, max 500mA
10MHz reference output:	0dBm +/- 2dB
Carrier ID:	DVB
Pre-correction:	Static linear gain and group delay
Number of DVB-S outputs	
Number of DVB-S2 outputs	
Number of DVB-S2x outputs	
Pre-correction	
Carrier ID	
BISS1/2 Mode 1/E scrambling (per TS)	
BISS CA scrambling (per service TS)	
Output redundancy	
24V DC and 10MHz reference output	

HEVC CODEC - ECx110, ECx210

Common features

Connectors:	I/O	8x HD BNC 75 Ohm (converter to BNC available or 2x QSFP 10/25/40 GbE)
SDI key reference specifications:		SMPTE 259M (SD) SMPTE 292M (HD) SMPTE 424M (FHD) SMPTE 2082 (UHD), two connectors
Data encapsulation:		SDI over SMPTE 2022-6 (ECx210 encoding only) SDI over SMPTE 2110 with PTP (ECx210)
UHD Input Formats:		Single connector over 12G SDI as SMPTE 2082 Quad 3G SDI as SMPTE 425-1 four quadrants Quad 3G SDI as SMPTE 425-5 two sample interleaved (input only)
Ancillary Data and VBI	VITC Source:	SMPTE 12M-2 / HEVC SEI as per ITU-T H.265
Operational modes	VITC Output:	HEVC SEI as per ITU-T H.265 / SMPTE 12M-2
	HEVC Codec software version:	Encoder mode
	(Selected at order):	HEVC Encoder Ultra Low Latency Mode (only on ECx110) Transcoder Mode (only on ECx110) Decoder mode

HEVC Codec - Encoder Mode

SCRAMBLER - CAx100, CAx110

Interfaces:		2 1/10G Base-T Ethernet or 2x1G SFP/10G SFP+ (Base-T or SFP must be selected at order)
Scrambling	Scrambling modes:	CA system BISS1 Mode 1 Fixed key
	Scrambling algorithm:	DVB-CSA v1 (48-bit) DVB-CSA v2 (64-bit) AES (128-bit)
Entropy reduction:		Yes for DVB-CSA v1 (Reduced to 48-bit) No for AES
	AES mode of operation:	ATIS IIF Default Scrambling Algorithm (IDSA) DVB Common IPTV Software-oriented Scrambling Algorithm (DVB-CISSA) AES-ECB1 / AES-ECB2 / AES-CBC1 Irdeto AES-CBC1
	PVR support (trick mode):	PES header in clear (leave a number of packets in clear after PES header)
	MPEG TS processing capacity:	6Gbit/s
	Number of services per scrambler card:	2000
	Video format:	MPEG-2, AVC, HEVC (in MPEG2-TS)
	Interface towards CA System:	Simulcrypt interface with optional backup connection
	Number of CA systems:	8
	Maximum number ECM: (sum all CA systems)	16000
	EMM insertion :	Yes
	EIS support:	Yes
	Tables Supported:	CAT generation
Licensed Features:	Number of scrambled services Number of CA systems	

BULK DESCRAMBLER - DSx100, DSx110

Interfaces		2 1/10G Base-T Ethernet or 2x1G SFP/10G SFP+ (Base-T or SFP must be selected at order)
Descrambling	Descrambling modes:	CA system BISS1 Mode 1/E BISS2 Mode 1/E Fixed key Verimatrix (Standard Security profile)
	Supported CA system:	DVB-CSA (64-bit)
	Descrambling algorithm:	AES (128-bit)
	AES mode of operation:	ATIS IIF Default Scrambling Algorithm (IDSA) DVB common IPTV Software-oriented Scrambling Algorithm (DVB-CISSA) AES-ECB1 / AES-ECB2 / AES-CBC1 Irdeto AES-CBC1
Transport stream	MPEG TS processing capacity:	6Gbit/s
	Number of MPEG TS services:	2000
	Video format:	MPEG-2, AVC, HEVC (in MPEG2-TS)

CHASSIS

Physical dimensions	DMG 4100 chassis:	19" 1RU 540 mm (440 44 540 mm)
	DMG 4200 chassis:	19" 2RU 540 mm (440 88 540 mm)
Module slots	Number of switch modules (front):	1 or 2 (active – active)
