

1PreP®

rapid preparation

CUTTING EDGE TECHNOLOGY

AMT's MOCSY®7 coaxial cable with 1PreP® rapid preparation technology bonds the cable jacket with the outer tape. This time saving process removes both the jacket and outer tape in a single step during the cable preparation process.

Peeling tape away from coax takes time and can often require nimble fingers. By eliminating the need to separately peel away the tape, 1PreP saves technicians valuable time and effort, and increases installation efficiency all while utilizing current prep tools and procedures.

ADVANCED FEATURES

- ✓ 1PreP technology design:
 - Eliminates step in cable preparation
 - Reduces preparation time
 - No need to change existing tools
- ✓ Currently available in tri-shield
- ✓ Features option of PCT's dry, anti-corrosion technology:
 - Patented dry, permanent coating on all outer cable shielding
 - Center conductor corrosion inhibitor
 - Simple, clean installation without messy or greasy compounds
 - Enhances drop lifespan
- ✓ RoHS compliant
- ✓ MoCA compatible

See our MoCSY®7 product specification sheets for ordering information.
